

---

Sam broadcaster is a free and open source program which makes recording and broadcasting live audio simple. It comes with a user-friendly interface and uses the OGG container format for its audio recordings. When broadcasting, it encodes the stream in H264 video format to MP4 files for Youtube. The program can also generate statistics such as file duration, number of listeners, reply rates, etc., which can be analyzed on the server side. Sam broadcaster features both HTTP/HTTPS protocol support as well as support for Tor hidden services (via SecTor).

Sam Broadcaster 4.2.2 download: <https://github.com/Tux3/sam-broadcaster/releases> Sam broadcaster 4.2.2 download mirror: <https://sourceforge.net/projects/tux3/files/sam-broadcaster-allinone-linux> Source code on github: <https://github.com/Tux3>

For Android TV : <http://www.androidfilehost.com/?fid=24052804347866181>

Sam broadcaster can be expanded with plugins which are created by third parties, allowing the software to be used in various ways for different purposes, including drama clubs, radio stations or streaming music concerts of bands.
