It does print correctly "1" and "2" but what i don't understand is that it does not return a "0" at the end. Why is that? public class Xj { public static void main(String args[]) { Xj x = new Xj(); Scanner sc = new Scanner(System.in); String input = sc.nextLine(); StringTokenizer st = new StringTokenizer(input); int a = 0, i = 0; while (st.hasMoreElements()) { String element = st.nextElement().trim(); if (element.equals("\*")) { i++; } } System.out.println(a); } } I have tried to break it down to this but it doesnt seem to work. I know there are a lot of other ways to do it but i want to understand what is happening with the StringTokenizer A: What you are currently doing is you are counting the number of characters which are \*. You should have a condition which checks the number of tokens and if it is greater than 0 then you will know

The course requires a certain implementation of an ArrayList, but I am struggling to understand how they have implemented this. So this is a picture of the assignment. The numbers underlined represent the contents of the ArrayList. I have seen the answers on the web, but I am still struggling to understand what is going on in the code. 2d92ce491b
