Eugene Hecht. Calkins. .: The Journal of the Optical Society of America A, 1(3), p. . Italian translation of Electronic Engineering Oenophilia, which includes a large collection of articles on optical materials, as well as articles from French, German, Spanish and Japanese publications. Eugene Hecht (6 May 1909 - 27 September 1987) - Biography from Trinity College Dublin [01-Aug-2006] · This invention enables the automatic detection of an intruder in the blind spot area of a vehicle. It is based on the optical phenomenon of "percolation" and on the fact that both light and dark areas in an image appear only when an object is present in the light path to the detector. No additional hardware is required, as the main microprocessor (CPU) of a typical computer, such as a personal computer or laptop, is sufficient. Moreover, the computer's network interface card (NIC) is only used for sending image data to the Internet and receiving commands to change the system's state, i.e., to enable the detection of the intruder. 2d92ce491b
