music.Q: How can I change the position of a logo in a Wordpress theme? In the front-page of my theme, I have a logo in the right corner. I need to move this logo to the left of the title. I have used `wp_register_style` to register the logo css. I have tried the following: But this doesn't do anything. I also tried to move the `custom-theme/css/custom-`

theme/sb-logo.css inside the theme folder and use this code: This code doesn't work either. It just doesn't do anything. A: Your code is fine. If your CSS is added in your theme's folder and you are using a child theme, you can probably just use the `body_class` filter instead.

```
add_filter('body_class',  
'rt_remove_in_front_class');
```

It can also help if you make sure that your CSS is loaded after your theme's stylesheet. “We are so

excited that our application was selected to be featured at the Cambridge Science Festival 2017,” says Liz Fellows, Executive 2d92ce491b
