The settings I have included in this Black Ops config is out of the box and will be out of the box with the game when it is released. You can find the details of my tweaks by going to the original post on forums, mod_zero. The following tweaks are what I have tried. Want to add, add-ons, tweak, change, or override a.cfg file? That's what this post is for. We've got a list of what we know to work right now, and also why we think it's a good idea. This is how I did my custom game config and the settings are changed accordingly. All comments are welcome and also suggestions. Config.cfg is a text file. Use this utility to edit the following: The config file is located in steam\steamapps\common\call of duty black ops. You must have read permissions for it in order for this to work. Read permissions can be found under the Files section of the Windows operating system. If you do not have read permissions, then you will not be able to edit this file and use this tool. To change settings, follow the steps listed in this post. This can be a tedious process for a lot of people, so it is worth it to save a lot of time in the long run by creating a manual configuration. Please read the steps and instructions carefully before continuing. The edits can be made in this Config.cfg file, while game is running, or you can edit it

I tried to post this as an actual post on this site, but it said I couldn't because it wasn't about a "specific hardware or software". Step-by-step instructions to change all your call of duty black ops settings with just a few commands. So here it is, my Black Ops config file for Call of Duty: Black Ops. If you are having trouble with the settings you have in the config file, here is a video tutorial that might help you out. This is just a quick tutorial on the config.cfg file for Call of Duty: Black Ops. These settings are not a 100% guarantee for getting better fps, but they should give you an indication of how you can tweak your settings. Hope this helps :) But I already made this on the steam forums. Here it is. 1.UPDATE: - SETTING TO VARIATION!!! You can now change the Low/High settings of the weapon "SKILL" and "FULL AUTO"!! Doing this on the command line in game should give you 3/10/15 FPS vs the actual 21/20/20. So it's a nice little tweak, when doing the "config.cfg mod".
