I have three tabs, Tab1, Tab2 and Tab3 and it shows up on Tab1 and Tab2 but not on Tab3. Why? If i remove the Tab3 and make the Tab2 take its place, it will show up on all three tabs.. A: From your code its not clear what you want to achieve.If you want to use your three tabs, all must be visible at a time. So, either you hide first two tabs on view pager, and show only three, or if its possible you can use Fragments and FragmentPagerAdapter. If you want to use only one tab at a time, and hide the other two, use first method. for the last ten years! Even when a number of people stopped writing, they always kept the domain. This gives them a good reputation and less competition. Also, I am a bit surprised that the site has a 22,976 unique visitors, considering how old the site is. I've added a paragraph about the origin of the name. Quote First of all I would like to congratulate you on this work and thank you for the support. Personally, I don't think the name is perfect, but I'll leave this for another time. I didn't find any bad comments about this site, but I will take care. I will not change it. Thanks for the information, i must admit I thought it was nice I 2d92ce491b
