What Camtasia 8 needs To get started, you will need a computer that is running a 64 bit operating system with a 64 bit processor. You will also need a web camera and a microphone. If you have a video camera, you can take advantage of the built in video capture of Camtasia 8 to record and edit your screen while you are recording audio. What Camtasia 8 will do for you Camtasia 8 is an amazing editing program for video. You can use it to capture your screen while capturing audio and save it as video. You can also use it to record a webinar or just a simple presentation and save it as a video. You can take advantage of your computer's built in microphone and webcam to record yourself speaking and use Camtasia 8 to edit your video with transitions, titles, captions, and more. What Camtasia 8 is not You cannot use Camtasia 8 to record your screen in high definition. If you use the built in webcam to record, it will be in standard definition. Things to know If you want to get the best results for editing and creating videos with Camtasia 8, you will need a good computer. The graphics card that comes with your computer is the most important part of a video editing program. If you can find a computer that has a decent graphics card, you will get the best results. The processor is less important as Camtasia 8 is able to handle the slowest processor available in most computers. The built in webcam will give you a lower quality video but it's still good enough for simple video editing. If you plan to record yourself speaking, you will need a good microphone and a good sound card. Conclusion If you need to edit video in a Windows 10 computer and you have a web camera and microphone, you can try Camtasia 8. It works and it is easy to use but it's not the best program for editing video. It is an excellent program to capture your screen while you are speaking and recording audio with a webcam./* * JBoss, Home of Professional Open Source * Copyright 2010, Red Hat Inc., and individual contributors as indicated * by the @authors tag. I'm really frustrated because Camtasia Studio 8 won't display my video . editing. I tried to find a solution but I didn't find anything. I tried "Camtasia Studio cannot connect to the internet" but it doesn't make any difference. You can try this: Click on the Camtasia Studio 8 icon and select "File" - "Open and Save As" - select the folder where you want to save the file and click "Save". You should then see the file on your desktop. That should be all you have to do I don't think it can be that easy.
