References External links Category:13th-century Arabic books Category:Tafsir booksQ: The Haskell-platform distribution didn't install base I am trying to install haskell-platform on Ubuntu 12.04. This is my first time trying to do this. I downloaded the platform-2013-1.0.0.0.tar.bz2 file from When I extract the file to a location, there is a folder: tarfile-2013-1.0.0.0.tar.bz2 and another folder: tarfile-2013-1.0.0.0.tar.bz2.0.2.0.tar.gz. I opened the 2nd folder and it opened a folder named metadata and when I opened it I saw 3.so files and 2.o files. But when I try to run cabal configure I get the following error: configure: error: could not find xl-compiler-2013-1.0.0.0 installed From what I've read I downloaded the right version, I'm just not sure where the files are. A: You probably need the xl-compiler-2013-1.0.0.0 package: sudo apt-get install libghc-xl-dev xl-compiler-2013-1.0.0.0 There are no files or files with.so extension, but.o files, because xl-compiler is only a development package, which only produces.o files. Depending on the package manager, 2d92ce491b
