Suppose I want to create a mock of a class with several properties. How do I do this? In the real world, I may have a class with several fields that need to be mocked, such as: public class Foo{ private List bars; private List strings; private Map

---

stringsMap; //etc... } I want to use Mockito to make a mock of a new Foo, so I can easily mock the three lists and the strings map. However, I cannot figure out how to do this. I've tried things like this: `@Mock List bars = mock(List); @Mock List strings = mock(List); @Mock Map stringsMap = mock(Map);` But of course this will fail because the lists contain different types (Bar and String). Is there a way to say that the mock should be of type List? A: There are several options, one is to use the method `mock` on the class Bar/List/String: `List bars = mock(List.class); List strings = mock(List.class); Map stringsMap = mock(Map.class);` Then in your `@Mock` annotations. A more sophisticated solution (which works even with Java8) would be to use `createMock` instead of `mock`: `List bars = createMock(List.class`

---

A: It seems like the spider iris not only opens PDF files, but also the files in your Downloads directory. In the dropdown menu, do you see the Downloads folder in your File Manager app? In the top-right corner of the file manager, do you see a down arrow that allows you to select the Downloads folder? If so, click on the down arrow, and select Downloads. Then, open the PDF in the browser. If not, try these steps: Open the software, click Options, then Preferences. Then, on the first tab, in the Advanced section, make sure the "Open folder and all subfolders" box is checked. Click OK on the last tab. Then, in the same folder where the PDF is downloaded, try opening the file in another program to test it's open-ability, e.g. Adobe Reader or an Acrobat viewer.

Apple set to say iPhone maker no longer infringes Apple is set to begin a new round of legal battles with Samsung in its battle for smartphone supremacy as it prepares to file a notice with the US International Trade Commission saying it no longer infringes patents held by Apple. The tech giant is expected to say that Samsung has

---

infringed some of Apple's patents in its Galaxy range of handsets and tablets, according to a report in the New York Times, as well as a letter sent to the ITC in early December which looks to have leaked. The report, citing unnamed Apple sources, says that Apple is set to sue Samsung and will argue that the South Korean firm's products infringe Apple patents for the iPhone, iPad, and iPad 2. Apple is also said to be moving towards a total ban on the Galaxy line. Samsung is currently in the midst of battling with Apple in the US over many of the same patents. The two firms were called before a jury in a San Jose, California court last month and the duo claimed to have discussed a settlement, only for Judge Lucy Koh to dismiss the idea. It remains to be seen whether Samsung will settle with Apple, but the report says that the company has announced that it is making moves to bolster its defenses, including building a new legal team to take on Apple. Samsung has a few cards up its sleeve. The South Korean firm has a number of patents it has been alleged to have infringed on by Apple, including
