This add-on runs on Windows® Vista, 7, 8, 8.1, 10. KEYMACRO is a fast-running utility that can be used as a stand-alone program, or it can be integrated with one of many other utility programs, in order to perform decryption tasks. KEYMACRO was developed to be a fast and highly efficient tool for Windows® users that need to decrypt data, both within a data-crunched environment, such as a corporate network, and on a mobile device. KEYMACRO will handle all of the heavy lifting, without any dependency on other third-party programs, as it does not make use of any external libraries or other code, and it supports various methods for encryption, both symmetric and asymmetric. Besides that, KEYMACRO features the best balance between processing speed and memory use, so you do not have to worry about slowing down the host computer, by taking up additional RAM space. KEYMACRO has been designed to be intuitive and easy to use, in order to make it a breeze to decode data. Users can easily select a method for encryption or decryption from the options provided, and perform one of the many possible data decryption processes. KEYMACRO can work with any method of encryption or decryption, including encryption with ASCII, Unicode, TrueCrypt, SevenZipCrypt, 256-bit Advanced Encryption Standard, 128-bit Advanced Encryption Standard, 64-bit Advanced Encryption Standard, or the new 256-bit Data Encryption Standard that was recently approved by the U.S. Government. With multiple key sizes for both encryption and decryption, users can choose which method will work best with their specific files. KEYMACRO will also allow users to select an encryption or decryption method that can be used for both files and entire folders. Besides the decryption and encryption methods available for users, KEYMACRO also comes with the ability to perform decryptions and encryptions on a file-by-file basis, as well as entire folders, by utilizing the process's inbuilt speed and efficiency. Guinea-pig and human in-vitro fertilization (IVF) was performed using spermatozoa frozen in propanediol. After thawing, the motility of the spermatozoa was assessed by a computer-assisted sperm analysis system and the samples were divided into three groups: three aliquots of 400 X 10(6) spermatozoa, two aliquots of 250 X 10(6) spermatozoa and one aliquot of 120 X 10(6) spermatozoa. All groups were assessed as to their ability to fertilize pronuclei in an in-vitro-fertilized cytoplasmic transfer model. Guinea-pig spermatozoa thawed at 0 degrees C for 30 min in propanediol were found to be of satisfactory motility, the average rate of motility being 76.7 +/- 6.2% (+/- SD). They also proved to have good survival rates (37.8 +/- 11.8%, respectively), fertilizing pronuclei in 88.1 +/- 6.7% (+/- SD) of the cases, and producing viable zygotes with an average rate of 56.8 +/- 15.9% (+/- SD). Guinea-pig embryos produced by IVF with spermatozoa frozen in propanediol were able to be transferred to the uterus. All the blastocysts produced survived in the
