It can be used as an offline word processor, with a 2D draw program, a professional-level

Studiomatics is a comprehensive software for radio automation. It has the following modules: MediaBase (SQL database) which stores metadata, module settings, last played tracks and metadata in the local database of the station. Editor controls the player and the web portal. It generates playlists and build a dynamic web page to run the player. Player plays automatically generated playlists of songs and simulates on a remote station, for instance, for the web portal. Recorder records automatically the songs played by the player. Broadcaster sends automatically broadcasts (muting, and sending messages to the web portal) of a station. SMS sends texts and e-mails (and the status of a station) to the web portal. Voice mail saves messages to the local database. News fetches news to the local database. News fetches news from RSS and other web pages. Commercial plays automatically a commercial of a station. Kiosk plays automatically generated playlists of songs. Web portal is a platform for building and managing station web sites. The main advantage of Studiomatics is that it is adapted to the extensive needs of radio stations. Thanks to the flexible interface and to the .NET Framework and COM (ActiveX), it does not require a platform-dependent programming. With Studiomatics, a seamless integration

of the station with SQL databases and web technologies is possible. For instance, you can manage multimedia content, playlists and advertising with the SQL database. You can set your station to be integrated in the platform of a web portal and to use your own channel. Moreover, the Studiomatics configuration files are very easy to create, modify and compile. This enables you to quickly integrate or add new features to your radio automation station. It is also possible to compile Studiomatics as a program or as a dll. That makes it very easy to integrate in a Java or any script programming language.

Furthermore, Studiomatics is very simple to install, quick to configure and well-documented. In addition to radio automation, it can also be used for desktop applications or gaming. Features: MediaBase (SQL database) the player, the player controls the radio and the web portal the editor, the editor controls the player and the player recorder, the recorder records automatically the radio broadcaster, the broadcaster sends automatically broadcasts (muting, and sending messages to the web portal) of a station SMS, 91bb86ccfa

Studiomatics is the most reliable, powerful and extensible radio automation software for radio stations. It has the following modules: MediaBase (SQL database), Editor, Player, Recorder, Broadcaster, SMS, Voice mail, News, Commercial, Kiosk, Web portal.

SoftwareDeveloperShop is focused on delivering the best possible software and hardware for DJs. The best part about our company is that we are a small company. I am really good at talking to people and figuring out what they need. What can you expect from us? Most people are not aware of the amount of work that goes into your DJ software. We have a lot of experience and a budget to get it done right. We can and do do any programming or hardware required to make your DJing better. I do live interface programming on DJM systems, and hardware programming on Soothe systems. I also do a lot of design work (look and feel). I also have a great deal of experience building broadcast automation systems for live broadcasts, commercials, etc. Some of what we can do is: - API modification to get the controls working better. - Adjust the A/V to be more analogue

What's New In Studiomatics?
