Requirements: Similar software shotlights: Remote Computer Description Updater 6.3.0 Beta - Screenshot Remote Computer Description Updater is a user-friendly piece of software developed in order to provide you with a quick and efficient means of modifying the description of local or remote PCs. The program's interface is quite basic, making the entire process very simple and intuitive. It can be used to update the description of the computer you installed the application on, but it can also work for remote PCs, on condition that you have the proper administrative credentials. In order to change your machine's description, you need to run Remote Computer Description Updater in administrator mode. After launching it, you have two distinct options of how to use the utility. First, you can simply press the 'Gather' button and it will automatically display the description of the computer you are running the tool on. If one or both of the assigned fields are left blank, it means that the machine was not assigned a name or a description. You can then type in a preferred phrase and click on the 'Update' button. Similarly, if Remote Computer Description Updater does retrieve the PC's description, you can just delete it and replace it with a new one, then press the 'Update' button. However, if what you want is to change the

description of a remote computer, then you will need to enter its Domain Name System (or DNS name), and subsequently press the 'Gather' button. A pop-up window will prompt you to input your credentials. After entering your username and password, you can press the 'Login' button, and modify its description by clicking on 'Update'. To conclude, Remote Computer Description Updater is an easy to use and efficient application designed to help you change the description of your PC or a remote machine, requiring little effort on your part, only administrator privileges.
