When you pinch it out it will fade back out of view. Magnifying Glass can be customized by adding/removing hotspots. Only the hotspots that you have added will be shown in the magnifying glass. You can set the hotspots anywhere you like, including into windows, and the border can be of any shape or size (click and drag around to create your own shape). Magnifying Glass can be positioned anywhere on the screen. It's not limited to windows, which can make it easier for people who use non-standard sized screens (such as laptops). When you put your finger on the hotspots, all the hotspots inside that area get magnified, and the magnified area can be moved to any hotspot position.
