Q: What does it mean to "let[] work"? I found this in a book of scientific papers: The basic equation solved by both the American and the British teams is $X_t = [x_t - (x_t - x_{t-1})]^2$, where X_t is the position at time t and x_t is the position at time t minus x_{t-1} at time $t-1$. Both teams let[] work the equation until convergence [of the solutions] at time $t=0.5$.

What does it mean to "let[] work"? A: As already answered by @JS, it means to follow the steps of the demonstration with some delay. I want to add that this is a well-established terminology. For example, a colleague of mine I was asking her about this, if something doesn't work and you want to try it again. A common expression she used was "let it work" See Data was collected using a wrist-worn sensor system (WSD -- Wireless Sensor Device; InvenSense) to measure three-dimensional (3D) joint kinematics during high-velocity jumps. Participants were instructed to perform five attempts at a maximal vertical jump using a competitive approach. During landing, participants were instructed to rotate their knees to a 90° stance and initiate the countermovement with maximal force. They were then instructed to jump as far forward as possible and land with full power. It is known to use inductively coupled plasma (ICP) instruments in the determination of the concentration of certain, so called, "trace" gases in the gas or liquid phase. Such trace gases, for example, may be present in a liquid phase (for example, oil) in trace amounts, with the concentration of those gases either being insufficient for detection directly by a mass spectrometer or not detectable without the use of an ICP instrument. In the prior art, it has been the practice to perform the detection in two steps. The first step consists of producing a plasma by an inductively coupled source and transporting the ions and atoms to the mass

Q: How do you state that a function 'x' is both continuous and discontinuous at $x=0$? I am interested in the behavior of the function $f(x) = \frac{1}{\sqrt{x}}$ for $x > 0$: Display arrows on left of page on iTextSharp I am using iTextSharp to create some pdfs. I want to display a sequence of four lists in the following order. [1]...[4] But instead of the list appearing right to left, I want them to appear left to right. In my case, you could also say the heading is left justified (and this is what I want). I have found that this feature is already implemented in another pdf, which you can open using this link. When clicking on the pdf, you can see that the PDF displays as follows: After going through the code, I found that this is done using the command. Has anyone ever implemented such a feature using iTextSharp? A: When using `\r`, the order doesn't affect how the content is laid out on the page; it only affects how the content is displayed. The horizontal lines are
