Almost any PC user runs into the problem of unwanted Windows Updates that bring in new malware or virus infections. If you are into Digital Security, then you would have already heard of many threats that spread through malicious Windows Updates. We are going to take a look at the most common threat and discuss how to prevent it in the best possible way. You can remove the updates with some older version of Windows, but that might cause your system to become vulnerable to various malware threats. In the case that you are not comfortable with patching your OS, then we recommend you to use Best Antivirus Software and Best Anti Malware Software. 2. How to prevent Windows Update from slowing down your PC Windows Update is the tool that automatically installs all kinds of important updates in Windows. There are a number of things that can slow down your PC, which is directly related to Windows Update: Processor Cores RAM Disk Space HDD Speed All these things directly impact the speed of Windows Update. These things are covered in detail below: 1. Processor Cores Every Intel CPU comes with a set of cores. Every core is assigned to a single function that the CPU can perform. If your computer has a set of cores, then the more cores you have, the more features the CPU can perform simultaneously. The number of cores is directly connected to your CPU speed. With fewer cores, your CPU performs one task at a time, while with more cores it performs two or more tasks simultaneously. Now, while your PC is running, when a particular application needs to be performed, the application is given control over your CPU by Windows Update. Every time the Windows Update runs, it runs in the background while your other apps are performing. As a result, if you have a lot of applications running, and

NoClone Home Edition is a duplicate file remover that provides some innovative ways to search and delete unnecessary files and thus free up disk space on your computer. Customize your search operation Although you may find the interface a bit difficult to navigate at the first sight, it takes just a few minutes to figure out how to use the app. The search criteria tools are nicely organized in the left part of the main window, while the search results are displayed right in the middle of the screen. You can thus search exact duplicate files, duplicate MP3s, similar files, compare folders, duplicate Outlook emails, files larger than 1 MB or any other file based on user-defined rules. Once the searching process comes to an end, NoClone Home Edition opens a new tab in the main window and shows the results, including file name, file size, date modified, duplicate group and folder path. Obviously, you can select one or multiple files and either delete or compress them in an archive. Several ways to handle duplicate files NoClone Home Edition boasts what's being called "Smart Marker", an advanced utility designed to help you mark the files you wish to manage automatically. You have the option to configure the tool pick the files by date, size or length of file name or even by folder. There are three different ways to delete the marked files: delete permanently, move to Recycle Bin or replace by NTFS link, with two different options, remove empty folders after deleting and replace by shortcut. NoClone Home Edition is pretty easy to use, not only thanks to its intuitive interface, but also because of the tips displayed right in the main window, no matter the task you wish to perform. To end with If you ignore the fact that it needs a moderate to high amount of CPU and RAM resources, NoClone Home Edition is quite a handy piece of software solution. And with a few improvements here and there, it could easily become a top product.
