- Simple, Fast & Useful - Attachments, Docs and Images - Always Safe: 1 GB Safe - Securely Private: Password protection, Encryption, Autorun to go offlineThe long-term goal of this program project is to determine if the phenotypic expression of classical galactosaemia is due to the accumulation of galactose-1-phosphate (Gal-1-P), the precursor of the UDP-galactose:N-acetylgalactosamine-6-sulphotransferase (GalN-ST) that is deficient in this condition. Therefore, in this application we are proposing to study the chemistry of Gal-1-P. Gal-1-P is not stable and converts to lactose monohydrate (Gal-1-D) via a water addition. Enzymatic determination of GalN-ST activity in erythrocytes from classical galactosaemic patients and controls will be used to compare GalN-ST activities in these two groups of subjects. Normal GalN-ST activity will be determined using microplate assay and kinetic determination methods. Both in vitro and in vivo experiments with cultured cells and erythrocytes will be used to determine the rate of conversion of Gal-1-P to Gal-1-D and GalN-ST activity will be measured in various cell types to determine if GalN-ST activity is localized in the same cell types as Gal-1-P. To answer these questions, the application has the following specific aims: (1) to develop a stable isotope-labelled galactose precursor to elucidate the structure of Gal-1-P formed in erythrocytes in vitro and in vitro and to determine the rate of the reaction between Gal-1-P and water. (2) To develop an assay for galactose-1-phosphate-uridylyltransferase in erythrocytes and to determine if this enzyme is deficient in classical galactosaemia. (3) To develop a new method for the quantitative measurement of Gal-1-P in the blood of galactosaemic patients and controls by HPLC using a stable isotope-labelled galactose-1-phosphate as an internal standard. (4) To assay the Gal-1-P content of various cellular and secretory materials from cultured cells and from human plasma and urine to determine if Gal-1-P formation

----- BasicDiary is a personal diary application that enables you to securely store your thoughts, stories, wishes and daily activities or events. The main window displays the record title, and alongside written notes and other details. It is a simple text editor that does not include any formatting options at all. You can paste, type or write the text, and you are done. However, you can attach multiple files to each entry, and they can be then exported and saved locally. Apart from attachment, each record can contain various text, number, date, time, position attributes, which enables you to insert statistical data into the diary. The application comes with a built-in calendar that can be used for easily navigating throughout diary entries. The 'goto' function and the advanced search tool complete the feature set, enabling you to easily jump from one date to another, without using the calendar. Actually, the 'Find' dialog enables you to find a record that contains a specific keyword within the title, the content, the attachments or the attribute list. Apart from its own integrated security, BasicDiary features password protection and enables you to encrypt your diary's database, making it impossible to reach if the key is unknown. To improve data security even further, you can instruct it to close itself automatically during inactivity periods. Other features include integrated report generator, HTML note editor and its own advanced search tool. BasicDiary is a very powerful diary application, and it is indeed the best full-featured diary among all similar applications. The price is a bit high, considering the extensive feature set, but the developer is willing to let the application being listed as free-trial.
