A: I've made a regex for finding urls from all the content in a string: `import re def find_urls(text): for match in re.finditer('(https?:/)?([-\w\.\.]+)(:\d+)?(/[w/_\.\?%&=?~-*])?', text): print(match.group(1))` Example text: `> "_d=""_d=""_f="/home/"_f="home"_t="main"_g="">_f` Output: `> home > /home/ > home/ > /home/main` It's kinda hacky, and may break if the url isn't valid, but it seems to work ok. Q: How to I pass down an Audio Session for another view? I have a view controller that has a button that plays a file. I'm thinking I will make the audio session the same for all the view controllers, but I don't know if that is possible. Can I pass down an audio session from one view controller to another or what is the best way to do this? I would like to play a file in another view just like the button I play one in my view controller. The code I have so far is below: In my view controller I play the file: `@objc func playFile() { if let url = URL(fileURLWithPath: file) { if #available(iOS 9.0, *) { print("source is URL") if let player = AVPlayer(url: url) { player.play() } } else { print("source is file") if let player = AVPlayer(contentsOf: url) { player.play() }` 0298e982ba
