A pack of six flexible, popular ready-to-use presets, covering every common patching scenario. In some other software packages you might be used to presets that enable you to define parameters, but not execute your patched ideas in real time. This is not the case

with this powerful tool of the VST Plugin Factory. When you define parameters of your patches with the help of the patch editor and assign them to all the patch controllers, your results will be executed immediately in real time - you will hear the new sound as it has been created. Of course, the patch editors are not adjustable parameters and this is a serious limitation. However, as these have the potential to create system-specific parameters, almost

everyone will find something useful in one of these six patches. The plug-ins in this pack are written in C++ and are available for any Windows 32-bit / 64-bit compatible CPU. The included demos feature usershow how to create different patch controllers for all the plug-ins, how to patch them, and also how to change their parameters. The available plug-ins are from: - Voxengo: - Plates - Pads - Pann - Ranging - EHPL - PHPL - Magnify - VST

Buchla Easel V is great for making music in modular systems and computers. It is designed to work with Moog and EHX gear. Buchla Easel V v3.0.1 Buchla Easel V v3.0.1 Description This is the first

release of Buchla Easel V, the Buchla Easel virtual version. The Buchla Easel V software from Arturia is a replica of a Buchla Easel hardware module. It is a state of the art rendition of Don Buchla's famous instrument that played a huge role in defining early '70s experimental West Coast modular synthesis.Q: Check if Button is fully transparent I have following HTML: #open-form { display: flex; background: rgba(0, 0, 0, 0.5); } #close-form {

display: flex; background: rgba(0, 0, 0, 0.5); } Open Close How can I check from jQuery if button is fully transparent, if yes, make it red otherwise, it has to stay green like it is. Currently I have no jQuery knowledge at all, I'm trying to solve this problem since 20 hours. Any help is appreciated. A: You can use rgba opacity for this. Pseudo is rgba(opacity, 0, 0, 0.5), where opacity is 0 for an entirely transparent element. $(function() { $('#open-

form.btn').each(function() { if ($(this).css('opacity') == 0)

Software substitute for the renowned Buchla Easel real analog instrument for the synthesis of analog waveforms. This plugin was reviewed by on on Jan 12, 2012 Coolest Stuff We've Seen All Week 20,210 hits This plugin was reviewed by on on May 15, 2010 Wow. This is very well done.

I am very impressed. Overall, this is an awesome synth, and probably one of the best digi synths ever made in the midprice range. It seems to have all the features that Buchla is known for. I like that it is fully analog and only a software application. There are some downsides to the design. The interface isn't very intuitive, and I did find it to be very hard to figure out how to sequence from my keyboard. I wanted to use my keyboard for sequencing, but I

had to repeatedly take my hands away from the keyboard in order to click the keys for the sequencer interface. I'm sure this is just because I'm no keyboardist, but I'm going to be working on the interface. The main drawback of this is that you cannot hear the synth's output. The key will be to enhance this feature so that it is as 'real' as Buchla. I know this could be done with a mixer on top of the software application, but I imagine that would be a messy

solution. I think with some work, Buchla could easily integrate the output into the sound output, so you could hear your instrument, and still use the controls to get the results that you want. This is a really great and unique instrument, and I am looking forward to seeing how it develops. This plugin was reviewed by on on May 15, 2010 Wow. This is very well done. I am very impressed.
