Path or guidelines The plugin can be used either to create paths or to create guidelines, the guidelines can be used for path alignment and much more. Creates vanishing point guidelines. The guideline can be used for scaling / rotation / slant transformations and more along with guidelines for path perspective designs (such as for text). Vanishing point The vanishing point of the grid can be modified to create a basic grid or a grid zooming off to the left or right or an intense corner zoom design or skyscraper zoom designs and much more. The grid size and start position can be modified to create many different 3D grid designs. PerspectiveGrid plugin comes with a huge selection of presets to help you get started with the plugin set. Tumble button Simply click the tumble button to experiment with 100s and 100s of different designs from the basic grid to totally extreme grid and many different 3D grid designs in between. Convergence and projection The plugin modifies the convergence of frames and lines as well as the approach to the VP as well as the projection lines and approach of the lines to the VP and much more, also packed with randomization features and interpolation features to create many different designs from the basic grid. The grid can be basic straight lines or the grid lines can be curved in different directions to create many different and unique grid designs. Rotation and transformation The grid can be rotated and modified in many different ways. The plugin set can be set into pattern / tile mode where the grid is duplicated as a tile. Many different tile centers can be used such as the start position of the grid or the document center or random center. Many millions of colorful grid designs can be created. Colorful designs The grid can be filled with colorful lines and background colors in many 100s of ways using many different color apply methods such as target to a color, alternate color, inverted color settings, random colors and more. The colors can be modified to use the swatches from the swatches palette as well as creating different application rates of color. Randomization The grid can be filled with different opacity lines to create sketch like grids, or apply randomization of creation of lines to create random designs of grids or randomization of curvature to create unusual curved grid designs. Grid Measurements The plugin also can display the size / start position / vanishing point position / 'final' frame size in points (default) / centimetres / feet / inches / millimetres (approx guidelines measurements).
