This version of the DxDiag tool includes a new functionality to enable scanning of.dmp files. Before DxDiag 1.4.0.4 DxDiag was unable to reliably scan.dmp files with a SQL Server Analysis Services data store. This was due to the fact that a.dmp file is just a subset of a larger file and should not be used as an indication of a problem. To summarize, the problem with.dmp files was that DxDiag was not able to obtain all the information from a.dmp file and as a result, the scan reported false positives. With this release, DxDiag is able to reliably scan.dmp files and provide all the information about the data contained within that.dmp file. Additionally, this release includes a number of fixes to the Windows Mail functionality in the DxDiag UI and some reporting fixes to the Event Viewer.
