Arkane Studios.Q: Trying to replace

tokens using tokenize and matchit

gives error I am trying to replace a

token based on a pattern my_string =

'This is a test' for token in

re.compile('^test').split(my_string):

token2 = re.sub("test",

'Include',token) I get the error

NameError: name 'token' is not

defined I have tried many ways to define token and when I just print it it prints fine. I've scoured the error messages but I can't find anything that helps. Can anyone shed some light on this for me? A: You should use a comprehension, not a for-loop. Also, you will need to split the string on new lines to use `re.split(...)`. I would also recommend using the `group()` method to get the last token in the string and check it. Here's an example:

```
import re
my_string = 'This is a test'
for token in re.compile("^test").split(my_string):
    if "test" in token:
        print(token)
```
