Main features NetRadio comes packed with several popular online radio stations that you can choose from. Plus, you are allowed to play or stop the current audio selection and view the name of the band and song title displayed in the primary panel. What's more, the program gives you the possibility to alter the volume, bass, and other audio parameters, as well as pick the desired radio station from a drop-down list. On the downside, you are not allowed to create a list with your favorite stations, so you can have quick access to them. The utility doesn't implement a function for helping you insert a custom online radio channel to the list, so you need to manually add your own favorite radio stations by adding them to the "stations.txt" file that comes with the program. Tests revealed that NetRadio connects to a radio station pretty quickly and provides very good audio quality. It doesn't eat up a lot of CPU and memory, so the overall performance of the computer is not hampered.
