The New ACS is more like a "Software" Program than any other Custom Control System that is out there today. There are two main design elements. The first is the ability to create your own GUI Panel, (graphical user interface) from any existing image. 2nd: each ACS widget is capable of executing anything that can be created into your ACS GUI. Your ACS System is an application, with its own batch file, DLL, and Registry Entry for all of the other tools and programs that are required to control your Computer. RESTORING TO THE PREVIOUS SYSTEM: The Restore System feature allows you to save all of your settings into an ACS File, and then return to your previous state by loading your ACS file into your System. Ready to Create & Save: To get started, simply go to the new ACS.com homepage, create a free ACS account, and you will be taken to ACS File Builder. At ACS File Builder, click "Create ACS" and your new ACS file is created. You can then save your ACS file in any format of your choice, in your chosen location. Begin Creating Your ACS File. Then just Design your GUI with ACS File Builder and you're ready to start designing your ACS File. Once all of your ACS Files are complete, upload your ACS files to the ACS Store. Upload to the ACS Store. Now it's just a click and drag away. If you want more information, please visit the blog at Enjoy designing, creating, and saving your own ACS System.
