Two types of polymer solutions are used to study the self-assembly of polystyrene nanoparticles on microfluidic channels. First, homogeneous polymer solutions are studied with low concentrations of nanoparticles; second, non-Newtonian solutions are used with high nanoparticle concentrations. Each experiment contains a single viscoelastic solution: one of low and one of high concentration of polystyrene nanoparticles. We observe the spontaneous formation of nanoparticles films as well as the formation of bridges between micro-particles. We also show the significant effect of the initial conditions on the size and spatial distribution of the nanoparticles films. Finally, we demonstrate that these thin films have non-Newtonian rheological properties and measure the steady-state viscosity of the nanoparticle solutions., 128(1): 149–164, 2008. R. M. Dudley. GMail Print Multiple Emails or Single Gmail E-mails is able to print multiple messages from your Google email account. Straightforward layout The program offers a pretty clean graphical user interface where the most important buttons are laid out as steps and the primary tutorial guide is a big red 'READ ME!!' button. Except that, all the other options deal mostly with remotely controlling your Gmail email account. Effectively controls your Gmail account In order to connect to their Google email accounts, users have to enter their credentials inside the app, get the mail subject headers, and then select which of them the program should download and print. It's all basically a three-step activity. In case users want to select emails from Drafts, Spam, Inbox, or other folders, they can simply activate them in the GUI. The utility lists all the emails placed in that subfolder. However, to do this, you'll need to enable IMAP in your email account. This is a feature that allows installed email clients to remotely access your Google mail service. Additionally, some Gmail connection errors may persist, and users might need to click 'Download E-Mail Subject Headers' twice. Apparently it doesn't always connect properly with the account. The application also lets users have their email messages printed based on a certain subject. Users have to type a keyword and all mails containing it are show in the main window.
