On Friday, just days after the Israeli High Court of Justice threw out a petition to allow for construction – where this offensive was halted, the government issued a new tender for 2,920 housing units in a settlement on the heart of East

## Circuit Shop

Circuit Shop is designed for creating electrical and electronic circuits. It lets you design circuits in a variety of ways using the tools of paint, digital and analog devices, and edit it all with just a few clicks. Circuit Shop has three modes: logic, analog and digital. In Logic mode, you can design traditional circuits. In analog mode, you can connect and change objects, adjust the width of the connection, the length of the connection, the general object settings and choose between autoshaping and manual shaping. In digital mode, you can choose to design basic digital circuits, such as an exclusive OR gate or an NAND gate. You can also create a binary logarithm or generate random numbers. You can simulate the project before drawing it, including a comprehensive digital analysis.

You can export circuits to BMP file format so you can print them on paper or create pdf files. Circuit Shop is available in 20 languages. The English version is the most updated. There are no restrictions on how many circuits you can draw, nor on the number of layers on the circuit. There are no limitations on the complexity of the circuit. Digital circuits can be simulated. In analog mode, objects that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen, or to devices that are not presented on screen or the color of the circuit, you can choose the color of the circuit, you can choose the color of the objects to existing objects to existing objects to existing objects to existing objects to
