Duplicate File Finder can help you find duplicate files on your computer. It scans the whole drive for a single time, whether you select a specific folder or leave it to its default, and then it locates all the duplicates of each file. It's quite a simple utility, but it comes with a few cool features that can make it a formidable tool. Checking duplicate files First, you can use the scanning function of the program to locate duplicate files. This option is found from the menu and it takes you directly to the scanning window. This window shows you the entire system, in its broadest form, including the drive, the virtual drives, partitions and the most important directories. When the scanning is complete, you can either use the links to jump to each file or you can choose to sort the results. Both options produce the same result: a list of files that appear to be duplicates. When sorting results, you can leave the file names as-is, add prefixes or numbers, create shortcuts or click on selected files to display them in their full size. Deleting duplicate files With this function, Duplicate File Finder makes it easy to delete duplicate files that have been stored in your computer. All you have to do is select either the whole drive, one folder or the files that you want to save. When you click on the apply button, the whole operation will be carried out for you, and you will be able to find a confirmation message in the right-hand side pane. A special thing about this function is that when you delete the files, they will be moved to the Recycle Bin, meaning that they are not actually deleted. You have to choose the option to permanently delete the files, in order to free up the space, and they won't show up when you use the drive in Windows Explorer. In conclusion, Duplicate File Finder is a relatively simple app that has a lot of features packed into its interface and it's great for its price. Inno Setup Compiler is the best software builder for Windows. Its intuitive interface, the wide variety of available scripts and options, and the ability to create setups for all types of applications make it an indispensable tool for anyone who wants to quickly build their own software. The program's success is confirmed by the fact that it has almost no limitations, since it is used by many people to quickly create their own software, without spending a dime. The possibilities are nearly endless, as In
