## Gamoliyas

Gamoliyas is an open source John Conway's Game of Life game totally written in DHTML (JavaScript, CSS and HTML). The goal of Gamoliyas is to demonstrate what can be done with the DHTML languages. For this, Gamoliyas is shipped with the following languages: - JavaScript - CSS - HTML - Early versions of DHTML Markup - ActionScript - Java (using Java Applet) An early version of Java Speech Recognition was added, as well. Languages can be defined in an HTML file. Starting to play with Gamoliyas is easy, but getting good at playing is difficult. I made Gamoliyas because I'm fascinated by the game and couldn't find a game that is completely JavaScript, CSS and HTML. You can download Gamoliyas or view the source of this page to find out more. In the source code you'll see goody\_button.dhtml, which has a button that leads to the Game of Life challenge. If you want to see how the game was made or try a new life, you can download the source of this page. It consists of 4 files: - gamoliyas.dhtml - gamoliyas.js - epic.dhtml - epic.js Usage: For using gamoliyas, you'll need an Opera browser and some ideas how to play. In the source code you'll find a small sample. It's quite easy to play. For playing on the test-area, you can load gamoliyas.dhtml with the "game of life" button, press the down arrow or up arrow a few times and try the new life. Also, you can choose a new life by clicking the little man. New lives are named after the year they are made. For playing a new game, you have to set the "development flag" in gamoliyas.js. Defining of a new life is a bit difficult, but not to bad. By using the "development flag" you can play a new life every 5 seconds. Tutorial: To play a new game or to watch how it is made, click the "Game of Life" button in the source code. When the game starts, press the down arrow or up arrow a few times. If you press them a little faster the "development

## What's New In?

Gamoliyas is an open source multi-dimensional Game of Life game written in JavaScript, based on the game "Life" played on a two dimensional space. Nowadays we observe the development of different technologies to develop games and also to make the work easier. JavaScript is one of the developments that is so popular now and has a large number of applications. Since this game doesn't require much files, this application uses the JavaScript methodologies for loading, saving and loading the game. Implementation Gamoliyas features:  4 modes (A, B, C, D)  canvas for displaying the board as an image  current time for calculating the duration of the game  complete guide game  complete guide mode B  ALICE like layout of cells on each line  configurable on-screen grid size  configurable grid size (up to 24x24)  Board moves to random unoccupied cell of an adjacent block  Can save the state of the game  Can reload the saved state  Can load the saved state  Can save the state, reload the saved state and load the state. Please try to play the game first and see how it works. If you don't get it, try to play more and more and be more specific. Development: Gamoliyas was developed using DHTML because it is very stable and a code is not very heavy. Please feel free to suggest any suggestions for Gamoliyas development. Feel free to report bugs to me (email or write to me) at kito, coleco.com Your kindly support will be very useful and appreciated. Thanks in advance! Contact: Kito, kito\_toship@yahoo.co.jp Thanks Kito Alphabets Puzzles is an OST file for Alphabets puzzle games. Multiple versions are available for Windows and Mac OS platforms. Unlike other similar puzzles, there are no letters that would appear in multiple versions to form proper words. Every time when a letter is clicked, it gets displayed on board. The alphabet is rotatable and the board size is adjustable as per your convenience. The application gives you all the characters that are available in the game at once. Key features:  Rotatable alphabet
