While not an entirely novel utility among those who may have experienced a certain confusion about the possibilities of signals and waveforms. It is a combination of modules that is both easy to use and highly effective, given that, with the use of just a few mouse clicks, you can program complex macros with little fuss. With the remark that there is also an incredibly vast number of presets, it is safe to say that there is a function that is perfect for almost anyone. This could be the case for some people who could go through a veritable process of trial and error, choosing from a library of presets, and then test out their performance. Additionally, the waveforms that are offered by the program are excellent, as are the ones in the "preliminary" selection screen, with the mention that its effects are of the highest standard. Other features that make this program a must-have include a selection of built-in effects, the ability to display waveforms and spectral analysis, presets, a macro editor, sequencer and a measurement engine. Presets are especially helpful, since you can browse through a library of approximately 500 presets, or load an external one. What's more, you are also provided with a lot of information (such as the sampling rate, the number of channels, channel balance, and the frequency) in the "Settings" option, as well as with a huge number of options (such as the filter cutoff frequency, quality of the audio input, the number of waveforms, the selection of effects, the "Instant Macro Recording" option, the option to load an external preset, and much more). There is a specific measure to get the best sound quality from your audio file, for instance, you can simply increase the number of bits, as well as make use of the "Stereo WMA V8" format (there are also multichannel options).
