The software is also commonly used by architects, landscape architects, and civil and structural engineers. Engineers often use CAD to analyze design flaws and make necessary changes. It is possible to use AutoCAD to create virtually any type of two- and three-dimensional drawing and schematic. Autodesk has created special drawing templates that can be used as bases for many different types of drawings, including architectural, engineering, and construction. Templates and software modules are used to create architectural drawings, land-use plans, construction diagrams, and mechanical design drawings. If you are looking for a CAD app for architects, Civil 3D is an excellent choice. Civil 3D is AutoCAD's architecture-oriented, 3D-based cousin. It features extensive drawing and drafting tools for architects, including the ability to import and export Civil 3D drawings to AutoCAD. It offers features for mechanical, electrical, and structural design. With over five decades of experience in the AutoCAD software industry, Autodesk has established a reputation for good customer service. AutoCAD's documentation and customer support resources are excellent. AutoCAD's customer support line is 1-800-644-6908. AutoCAD's Help Guide is a primary resource for AutoCAD software information. Q: What's the difference between ViewState and Session I have read some articles about session and view state, but i still don't know the difference between the two of them. I just need to store some data and use them in the whole system, what is the best way to store them? A: The ViewState is the actual state of the control - if it is enabled, disabled, has been focused, etc. The Session is the data in the users session that is used by the application. So your application is stored in the users session and it keeps track of all the data you have for your application. Any user is going to have the same data in the session as anyone else. It all depends on your needs. Is there data that every user needs? In which case they need to be in the session. If the user has data that they only need for themselves, then it does not need to be in the session.
