What's New in the HopToDesk?

HopToDesk is a great alternative to other software available in the market today. It's a free, open-source utility designed for remote access to computers and shared folders. In addition to that, it offers plenty of features, including the ability to share files and the possibility to interact in chat when connecting to a remote host. HopToDesk Features • Remote Desktop Control • File Transfer • Webcam Control • Chat Function • Shared Folders • Firewall Control Integrate HopToDesk with your existing tools If you own, or plan to purchase, a software solution that supports remote connection, then HopToDesk will integrate with it perfectly, offering you a seamless experience. The first step is to get a web browser and an internet connection. Just as is the case with most "free" software, people will want to see advertisements before they get to the actual "free software." The fact that you have to pay a monthly fee to get rid of those advertisements is what makes this particular tool especially agreeable. Connect via your phone The least-obtrusive way to connect to your PC via HopToDesk is from a mobile device. This can be quite easy to do, provided that you use a mobile phone that's already equipped with cellular connectivity. If not, you may be required to purchase a data card or purchase an alternative device that can connect to the internet, such as a laptop. Head to HopToDesk's website The best way to connect to your PC from a mobile device is through HopToDesk's website, which includes a Walk-Through that will help you out in practically any situation. Each step can be performed via the site or by simply using an app for your phone. If you prefer to use the site, you can navigate your way through the tool by simply clicking on the link below. From there, you can access your PC via a phone, tablet, or computer. Enter your login credentials for your PC If you want to use HopToDesk, you need to enter your user name and password for your PC. Your user name and password are both stored on your computer's local network, so don't forget to log in before you hop to the HopToDesk site or app. Aside from this, you can also enter your phone number to use when you connect to your PC. This will make it easier to communicate with your computer's owner and other users from a phone. You can also choose to receive calls when on

System Requirements For HopToDesk:

Mac OS X 10.10 or later Windows 7/8 Minimum 2GB of RAM Graphics card with support for OpenGL 2.0 Before purchasing through the Steam store or GOG.com, please make sure you read the system requirements listed here.
