• Description: Sheet Lightning Pro is a specialized piece of software for engineering designs, allowing professionals to create massive tubular steel projects. The application is also meant for quickly producing high profile civil engineering projects. This 2D/3D CAD system is suitable for creating and unfolding sheet metal designs and can prove a handy tool during the fabrication or manufacturing processes. The utility can be used to handle cylinders, cones, rectangular ducts, and intersections between these. Straightforward looks The application comes with an intuitive interface that allows users to access its various functions fast. Additionally, it offers support for generating reports on the created projects so that users can spot any issues in them effortlessly. Users can start new projects with a single mouse click, regardless of whether they want to design an oval, ellipse, spiral or helix. Each of the designed pieces includes center line offset and sections, and they can be visualized in various positions and orientations. Take advantage of integrated designs The application comes with a series of included standard models, thus allowing engineers to learn how to make use of its capabilities much faster. They can also choose any of the pre-loaded designs and continue shaping the parts they need from there. The program allows users to analyze all designs built using the 3D system and to convert them to a parametric form. Moreover, users can unfold or weld all of the newly designed pieces at once, directly from the tool's main window. Export projects to CAD or DXF After completing their projects, users can export them to CAD or DXF, so as to be able to use them in other applications. Moreover, the application allows them to export projects to an application, as well as wire/solid to CAD and wire/face to DXF. In conclusion, Sheet Lightning Pro is an easy-to-use professional tool for creating engineering designs. The
