KEYMACRO is a small utility designed to record and manage keys (keys used as passwords, keys used as signatures, keys used as hidden objects, etc.) and key combinations. Key recordings can be saved to a file or to memory, and be exported in various formats. KEYMACRO also has a configuration file that allows you to specify which keys are to be recorded and where to be saved. Key passwords and signatures KEYMACRO allows you to record keyboard passwords and passwords, with the option of recording them in memory, a file or export them to a file.

Features - Records all keyboard inputs, so that you will be able to recall them later. - Simple to record the input: you simply press one key and the application will record it. - The application is very fast when it comes to memory recording. - You can specify where to save all the recorded keys, so that you can retrieve them easily from a different PC. - Can be used to record passwords, passwords, signatures and passwords, all at the same time. - You can choose to only record keys used for a certain type of action. - The data can be exported to a file, so you can retrieve it, edit it, and then export it again. - You can decide whether to use real or fake entries.

Configuration - Easy to add, edit and delete entries. - You can specify which keys you want to record. - You can specify whether you want to record passwords, passwords, signatures or passwords and signatures at the same time. - Specify the export format of all recordings. - You can assign a list of fake entries. - You can specify the name of a new file that will be created when recordings are exported. - You can specify the password or the signature to record. - You can specify the key to use for the password or the signature. - If you do not specify any key, the application will use the Windows default one. - You can also specify the name of a new file that will be created when signatures are exported. - You can also specify a password and a signature, but it is useless to do it. - You can also specify the name of a new file that will be created when passwords are exported. - You can specify the key to use for the password or the signature. - You can also specify the name of a new file that will be created when passwords are exported. 77a5ca646e

What's New in the Disk Wipe?

Disk Wipe is a software application which enables you to easily remove all the data from any hard disk, as well as removable drives, such as SD cards or USB drives. Surprisingly enough, this utility is portable and therefore, there will be no leftover files after its removal, and the Windows registry will not suffer any changes. Another important aspect is that it can be used on any PC you come in contact with, by simply placing the program files to a portable storage unit (e.g. USB flash drive) and double-clicking the EXE. You do not need to worry about the installation process, as it is not required. The interface sports a clean design, which allows all types of users to find their way around it, without experiencing difficulties of any kind. It is comprised of a few buttons and panels, so that you can easily view all detected drives and information pertaining to them. The wiping process is built similar to that of a wizard, and requires you to select the file system the device is based on. After this, you just have to click the "Finish" button and let Disk Wipe do the rest. There are multiple erasing patterns featured, from quick ones (one pass random), to very slow ones (US Department of Defense – 7 passes, Peter Guttman – 35 passes etc.), and you can also assign thread priority and view logs. Our tests have revealed that CPU and memory usage can be quite significant at times and therefore, it might affect your computer's performance. It is recommended that the wiping process not be launched alongside other demanding processes. Taking all of this into consideration, it becomes apparent Disk Wipe is an efficient and powerful piece of software, and a good choice when it comes to removing unwanted data from drives.
