Command & Conquer: Red Alert 3 Uprising Crack is a 3D environment, more realistic than the original version of the first Command & Conquer. Multiple .Q: Prove that $x = \cos(\frac{2\pi}{n})$ or $\cos(\frac{4\pi}{n})$ is a root of a polynomial of degree n Prove that $x = \cos(\frac{2\pi}{n})$ or $\cos(\frac{4\pi}{n})$ is a root of a polynomial of degree n. Where n is a positive integer. I've looked up the cyclotomic polynomials, and the answer is given to be $x^n+x^{n-2}+...+x+1$ when n is odd and $x^n-x^{n-2}+...-x+1$ when n is even. I'm not quite sure how to go about proving this. I know that a root of a polynomial can be found by taking the derivative of that polynomial, but this makes it difficult to figure out a way to generalize it. A: For simplicity, we will suppose that n is odd, the case that n is even can be worked out similarly. We have $$f(x)=x^n-\cos(2\pi/n)-1=0$$ By taking the derivative of $f(x)$ we get $$\frac{d}{dx}f(x)=nx^{n-1}-2\sin(2\pi/n)=0$$ Which implies that $x=\cos(\frac{2\pi}{n})$. Hope this helps.
