KEYMACRO is a complete software solution which enables users to record their keyboard action and then replay it as macros. Users are able to record any keyboard event like pressing a keyboard key or using a mouse button, and then replay the recorded keystrokes as a single keystroke. This is very useful in cases where you want to quickly repeat a text or a set of instructions a number of times. The macros may be programmed and stored in a number of different ways. You can create loops and specify timer events to call the macros when a certain time has passed. In addition, you can record a number of macros, then link them together, and use a hotkey to launch the linked macros as a single macro. Keyboard Macro Action: In order to create macros with Keymacro, you must first record the keyboard events. You can record keystrokes in Keymacro by clicking the button that appears in the toolbar or in the Windows

menu bar, and then selecting either "Record keyboard actions" or "Record mouse actions". For every keystroke and mouse button action that you record, a macro is generated. When you use a hotkey to launch a macro, this keystroke is executed in the same way as you did it in real life. Ease of Use: Keymacro enables you to create your macros using an intuitive interface. This makes it easy to record your keyboard actions as macros and replay them at any time. This is a much easier approach to creating macros than using complex macro programming languages. After you have recorded your actions, you can save them as a macro. Later on, you can edit or erase the recorded macros as many times as you wish, and save the changes. This makes it much easier than ever to adjust your macros. List of Features: Keymacro enables you to create your macros using an intuitive interface.
