2012 – for our anniversary, i’ve got an image of henry moyer, the botanist who showed him the leaves, flowers, fruits, and the process of which the pineapple was created. henry moyer didn’t know it at the time, but he was working with an eye-opening discovery. four-year-old george mason was being celebrated in england as the first-ever pineapple boy. he’d been sent to england for education, and on his first day in the country, while taking a walk, he was spotted by a botanist named henry moyer. moyer was a hard-working botanist and explorer, and he recognized young george as a potential source of valuable information. so, the botanist from england took young george back to the drawing room, and asked him to describe the pineapple. the boy said, “it’s like a big, juicy apple,” and moyer was jubilant. he told his superiors, the pineapple was a fruit! it was native to the south american indian tribe of the guanacos, and was considered to be an important food source. when moyer returned to the drawing room, he shared the news with a wide variety of dignitaries, including king george III, who called the botanist’s discovery a “wonderful and fortunate event.” moyer wrote up a paper about his

findings, and he and George Mason went on to become lifelong friends. Moyer was writing the botanical description of the pineapple for the world's best scientific journal at the time, "Philosophical Transactions of the Royal Society", which is a practice that continued in what is now known as "the Palgrave Consortium". Today, this journal publishes at least one issue every week, in England and in other countries, and it's still an important scientific publication. Henry Moyer didn't know about amygdalas and their role in helping us deal with stress. He just made a discovery that wouldn't have been possible without his curiosity and passion. Whether you're training or competing, or simply doing your everyday life, becoming curious is a pretty big deal. i
