On the eve of World Heritage Day, UNESCO's World Heritage Committee convenes in Geneva to review the inscribed properties and to examine the strategies for their effective conservation. The conservation of UNESCO World Heritage sites is a key priority for the organization. UNESCO is working with the State Parties to improve the current management of the heritage properties while also providing assistance in the form of technical and financial assistance. This has also been recognized in the recently adopted World Heritage Convention. According to the Convention, World Heritage sites and their surroundings receive a special attention and in-depth monitoring is carried out to preserve the integrity and authenticity of the World Heritage property. In 2017, UNESCO launched an international campaign to raise awareness among all stakeholder of the importance of conserving World Heritage sites. This awareness campaign is also underlined in this year's World Heritage theme, "Innovation for All."

Electrophoresis is an important separation technique employed in the analysis of a wide variety of biological polymers, such as nucleic acids, proteins, carbohydrates, lipids, biotoxins, etc. In some cases, the sample is first labeled with a substance that has an effective molecular charge. The labeled sample is then loaded onto an electrophoretic medium and an electric field is applied. In this way, different types of particles (e.g., charged macromolecules) will separate from one another depending on their molecular charge. The analysis of the separation is achieved by determining the change in the amount of labeled sample as it travels through the medium, which is done by measuring the eluted label. The separation medium may be a polyacrylamide gel, a

polydimethylacrylamide gel, or a semiconductor material, such as silicon, etc. The semiconductor medium, which is frequently used as an alternative to polyacrylamide gels, has some advantages over polyacrylamide gel media, such as providing a low dielectric constant and being chemically inert. By way of illustrative example, one type of semiconductor gel media used in the separation of nucleic acid poly
