Autocardiag Autocardiag The official Autocardiag website, where users can find the latest news and information about. Download CarBrain C168 CarBrain C168 Disk CarBrain C168 Instruction Manual CarBrain C168 CarBrain C168 Disk to load into the CarBrain C168 software, or

References External links Category:Software companies of CroatiaQ: How to solve the cubic equation $Sx^3-2x^2+7x-3=0$? How can this cubic equation: $Sx^3-2x^2+7x-3=0$ be solved? I know that when you encounter a cubic equation, there are three cases, but I can't see how to apply them here. Thanks. A: Consider the solutions to the quadratic $S(x-1)(x-3)=0$ S The solutions are $Sx=1, x=3$ S The equation can be written as $S(x-1)(x-3) + \epsilon x^2 = 0$ S The discriminant $S\Delta = (-3)^2 + 4 \cdot 1 \cdot \epsilon = 7$ is never S and so we need to consider the zeros to the cubic $Sf(x) = x^3 - 2x^2 + 7x - 3$ S At this point you have three cases... Case 1) If $Sx=1$, we get $S0 = 3 - 2 \cdot 1 + 7 - 3$ This adds up to $S0 = -0 + 0 + 0 - 0 = 0$. The roots are all real. Case 2) If $Sx=3$, we get $S0 = 9 - 6 \cdot 3 + 21 - 9$. This adds up to $S0 = 0 - 18 + 0$. The roots are all real. Case 3) If $S\Delta > 0$, the cubic has real roots. So if we have $Sx^3 - 2x^2 + 7x - 3 = 0$ We will have real roots if we have $S-2 > 0$, or equivalently $S1 > 0$ or $S7 > 4 \cdot 1 \cdot \epsilon$ or $S-2 > 4 \cdot 1 \cdot \epsilon$ or equivalently $S0 > -9 + 12 \cdot 1 > 0$ S and this holds only if $S1 > 8/3$ S
