AutoCAD is primarily used in architecture, engineering, and construction, with many other users also in other fields of design. The first version of AutoCAD did not work on Apple Macintosh computers. From the mid 1990s, AutoCAD for Mac became available.

AutoCAD is the top-selling CAD package in the world, with more than 4.5 million licences sold as of 2014. History of AutoCAD

AutoCAD was originally introduced in 1982 as a software package that ran on the MDA 11-inch System 1000. It was part of MDA's Microstation 1.0 development system.

Autodesk's key influences included the popularity of AutoCAD for DOS, the customer base and developer expertise at Cadalyst magazine, and the high rates of use of

computers at industrial design and manufacturing firms. Other influences included a user-friendly interface, the automation of common drafting tasks, and the ability to work on a desktop workstation as opposed to a mainframe. Autodesk was founded in 1978 by John E. Walker and Ivan Sharpe, both students at the University of Toronto. Although Autodesk focused on mechanical design software, its founders saw the potential for the software to be used in other areas, such as architectural and civil engineering. Early work included the first widely used computer-aided design program for architects. After the first public demonstration of the MDA MicroStation 1.0 system in March 1982, Autodesk was soon contacted by engineers at General Electric who wanted to use the design software for their own design projects. MicroStation 1.0 The

first version of AutoCAD came in 1982. It was developed by MDA Systems, a company based in Guildford, Ontario, Canada. It was named Autodesk. Development was led by Ivan Sharpe and John E. Walker, both students at the University of Toronto. Sharpe had invented and developed the SIMPA family of mechanical design software, which was the predecessor to MDA MicroStation. The design software was used to design steel frames for Canadian Architect magazine, a popular design magazine at the time. Sharpe and Walker hired William H. Gates III, an MIT grad who had worked for their previous employer, the Canadian firm Inland Steel, to write the first version of the product. (John E. Walker is the son of John H. Walker, the co-founder of Walker Industries, the company that owns Inland Steel.) Shortly thereafter, Autodesk was hired by General
