It's high time for a screensaver, which does not work as a screensaver. It's main goal is to work like a desktop application in the background and listen for events and alert you with a nice message. It really works as an alert system. Features: * Show or hide the application icon in the task bar * Receive alerts when there are new messages. * Go through the %ALLUSERSPROFILE% folder and when a new file is found, it will show its name and path in the alert. * Search and download files from the user's desktop. * Deal with.ipfs assets (bit.ly links) * Stay
