KEYMACRO can be configured to perform actions on your keyboard. It provides a very comprehensive set of macros, one of which you can assign to a key combo. For example, you can assign a macro to a key combo that performs a 2-click with the right mouse button. This action can be configured to delete selected text in a text document. You can also assign a macro to a key combo to open any program with a single mouse click. The program offers the option to display the current macro in the top status bar, to record the next macro to run when you perform a key combo, and to insert a shortcut to the currently running macro on the task bar. How it works A 2-click with the right mouse button will start a macro from your keyboard. You can assign any macro to any keyboard key combo. To activate a key combo, select it from the Macros list and press the assigned button. The Macros list is located at the top of the program window. Macros are evaluated in order. For example, the macro with the sequence Control-R will be executed when the Control key is pressed, the Meta key (Windows/Linux) or Command key (Mac) is held down and the Right mouse button is clicked. Thus, for instance, to open a file with a single click, you can create a macro that runs in this order: Control-R, Control-O. The Macros screen also allows you to delete any selected text, save it as a.txt file and send it to the Clipboard, and insert a shortcut to the currently running macro. Keyboard macro features •You can assign a macro to any keyboard key combo. •You can display the current macro in the top status bar. •You can record the next macro to run after you have performed a key combo. •You can insert a shortcut to the currently running macro on the task bar. Bottom line KEYMACRO is a freeware application that is quite user-friendly and quick to use. It allows you to create macros to perform various tasks. KYVIM Description: KYVIM is a utility designed to access the files and folders located on your hard disk through the KYVIM protocol and to perform the actions of the associated keyboard buttons. The program is able to create a dedicated shortcut on the task bar that will run the KYVIM protocol. KYVIM can connect to the KyVIM protocol 1d6a3396d6

Image courtesy of Flickr, cristinavelonato Read Review PhotoSync is a lightweight software application designed specifically for helping you synchronize your Flickr folders with the photo directories on your computer with the aid of a straightforward set of features. In order to use the program's uploading and downloading capabilities, you need to authorize the tool and sign in using your Flickr account. Look for the app in the system tray You can find the utility hiding in your system tray, running in the background. It doesn't interfere with your work. A double-click on the program's icon opens up the folder that stores the synced photos, while a right-click allows you to gain access to the configuration settings. How it works PhotoSync automatically monitors a special directory on your computer and synchronizes the changes made to the folder with your Flickr account. Plus, any adjustments that you apply to your Flickr images and videos are reflected in the directory from your computer. Configuration settings The configuration panel looks intuitive and easy to decode. Although there's no support for a help manual, you can tweak the dedicated parameters on your own. The application gives you the possibility to set up permissions (public, friends, family), check out log data about the downloading/uploading tasks and possible errors, and select the synchronization directory. You can recover the deleted photos and videos from the Recycle Bin or empty its content with a single click and choose between two synchronization modes, namely full (your Flickr account and computer will be synchronized) and
