On the other side, we've seen Android-wielding OEMs (like Moto) bundle their own software with their phones. This is essentially a fork of the operating system, with a couple of features added on top. The idea is to help lower the average price of Android phones, while also bringing in some sense of exclusivity, and preventing other carriers and manufacturers from basically just copying them. The "conversation" between carriers and OEMs is interesting to watch, since it's usually one-sided. There's no reason to believe that this is going to stop.
