What's New in the PatOut?

1) Create hatch pattern definitions 2) Export hatch pattern definitions to a.PAT file 3) Support editing of hatch pattern definitions 4) Export hatch patterns to other formats 5) The option to export hatch patterns to other formats (Dxf, PDF, etc.) 6) Customizable GUI interface 7) Support for multi-sheet patterns PatOut Plugin is a powerful tool for drawing and exporting your hatch patterns to other formats such as Dxf, PDF, and VIta(4.0). It also supports save a set of hatch pattern as a single.pat file. Using PatOut, you are capable of drawing multi-sheet patterns with the ability to export hatch patterns to.pat file. The extension supports the AutoCAD VLX engine. Professional tools for designing hatch pattern or in any other graphical data.PatOut can make it easy to learn and use AutoCAD's hatch patterns for engraving your designs. Previous version 1.00 Optimized performance: The PatOut plugin now runs faster than ever. Multi-sheet patterns support: You can save set of hatch patterns as a single.pat file. Exported hatch patterns support: The extension now supports exporting hatch patterns to.pat file. AutoCAD VLX engine support: The PatOut plugin now supports drawing multi-sheet patterns. Drawing Multi-sheet Patterns: For users, PATOUT is a powerful tool for designing hatch patterns. This VLX extension allows you to create.pat files with various shapes and definitions. By drawing multi-sheet patterns, you can export hatch patterns to a.pat file. Multi-sheet patterns can be created for different pattern sheets in one go. They can be further edited to create single-sheet patterns with the desired patterns. Exported hatch patterns: PatOut plugin now exports hatch patterns to other formats, such as.pat,.pdf, and.dxf. It also supports exporting hatch patterns to.txt format. Output formats: The extension supports PDF,.dxf, and.txt formats. PatOut GUI PatOut supports a customizable user interface. Users can select the start and end point of the hatch pattern when creating patterns. Pattern definitions are created in-place, meaning that users can edit the hatch pattern at any stage of its creation. Various settings are provided to manage complex hatch patterns
