I can commit to SVN without any problems but the SVN perspective is not working (I can't see SVN under the SVN view), I can't do anything in it. I tried to see if it would work in another version of Eclipse but when I downloaded Eclipse 4.3 the SVN integration doesn't work even if I try to fix it in the Preferences/ A: I found the solution: I first tried to fix my problem in Eclipse 4.3's SVN preferences. I unchecked the SVN local paths restriction, trying to change it to "Intermediate and merged local paths" and "Intermediate paths only". After doing that I can't commit the project but I can still see the SVN perspective. I tried to change the SVN local paths restriction back to "Intermediate and merged local paths" but I ended up in a situation where I couldn't do anything in the SVN perspective. So I unchecked the "Intermediate and merged local paths" and "Local paths only" and checked "Intermediate only". After doing that, I can see the SVN perspective again. How Do I Get Started? You are here Do you know how much your hair is costing you each month? Well, that's easy, you're paying twice. That's not a typo... you're really paying your hairdresser twice. The first time your hair is getting trimmed, it's for style and maintenance. The second time your hair is getting cut, it's for fashion. That's a lot of money - and every day you spend double on your hair can add up. Find out now if you're spending money on unnecessary haircuts and unnecessary hair treatments. Double Trouble The first time your hair is getting cut, it's for maintenance. The second time your hair is getting cut, it's for style, and they're both f30f4ceada
