} and the Soviet Union were unable to agree on a war's end, a German-Soviet accord signed on February 26, 1949, became effective. This agreement was intended to establish the basis for a future peace treaty. With the failure to establish a peace treaty and the establishment of a mutual security guarantee, the Big Three are generally accepted as the only world leaders to have met three times at the same place, at the same time, during the course of a war. In January 1991, three years before the German reunification, Helmut Kohl was elected German Chancellor for the second time in a landslide victory over incumbent Helmut Schmidt. Shortly thereafter, on May 4, 1991, German reunification was celebrated by the people of East Germany with the establishment of the German Democratic Republic. At that time, Reunification was seen as a necessary means of ending the Cold War. Helmut Kohl quickly

## Shoutcast Radio

Shoutcast Radio is actually a small sidebar gadget that allows users to listen to Shoutcast streams, no matter how inexperienced they might be. The Shoutcast Radio interface closely resembles the gadgets that come with the Windows operating system, but you should also know that you can change the theme, as it offers a few options pertaining to this (red, green, blue, purple and orange, aside from the default one – Orbmu2k). If you right click the application, the context menu is going to present you with some more options, such as changing the opacity levels or enabling you to make the gadget always stay on top of all other windows you may have opened. These features are built in the Windows gadgets and therefore, you might already be familiar with them. The small utility permits users to listen only to SHOUTcast streams, by simply specifying the location of the PLS or M3U playlist. SHOUTcast is a type of software that allows digital audio content to be broadcast to and from media players, and thus enabling the creation of Internet radio stations. Furthermore, you have the ability to add the name of the station that you are listening to and it is going to appear in the gadget. All in all, Shoutcast Radio is a small but very useful gadget that allows any person, no matter how new they might be to the world of computers, to easily listen to their favorite radio station. Shoutcast Radio Rating: (4.4 / 5) New nugs are here. New lulz. New Tabs. New Nugs. Our highest rated host of the year. And he's here again, bringing the hammer down. The Year of the Dosha. We've been cursed since the beginning of time and for some reason, you and I are on the upswing. I'm not saying we are blissful and I'm not saying we are going to be miserable, just that we've got choices. We can pretend that things are OK. We can believe the wheat is always going to be wheat and the chaff is always going to be chaff. We can believe we're immune to these things, but we know they're coming and we know we can't control them, but we have our options. We can choose. We can choose to let the chaff rise up to the surface and enjoy the lulz and the wheat through the chaff. That's what this is all about. We've got choices.

### What's New in the Shoutcast Radio?

License: This article is licensed under the terms of the GNU Free Documentation License. The license is available from This article started as a response to DavidAbrantes, who asked whether it was possible to stream music to iTunes and other iTunes-supporting clients using SHOUTcast. The answer to that question is, well, yes and no. Yes, if you are using SHOUTcast to broadcast the audio content (which is the way to go if you are going to use this to its fullest) then iTunes and other iTunes-supporting clients should be able to stream it. No, if you are using this just to stream audio to other computers using the PC's sound card, then it's not going to work. Now, I'm not going to go into too much detail, because you should already know all of this. But I will give you some short examples. Now, the truth is that if you use a SHOUTcast-compatible app, then it doesn't really matter whether you are streaming audio or not. The only difference is that SHOUTcast-streaming apps are only going to get the audio information from the SHOUTcast-compatible server, and hence, if you have only a SHOUTcast-compatible app, then you are not going to be able to stream your audio. The reason why this doesn't work is that an application that is asking for SHOUTcast-streaming
