### AutoCAD X64

AutoCAD is used to create architectural blueprints and architectural drawings. Most architecture blueprints are 3-dimensional and architectural drawings usually use 2-dimensional drafting tools to simplify the drawing and make it easier to interpret the drawing. Architectural drawings are commonly used for commercial and residential buildings. Drawing tools include line, area, and marker tools. There are many types of architectural drawings and these include site plans, floor plans, building elevations, interior and exterior elevations, drafting blueprints, shop drawings, structural drawings, and construction drawings. Architectural drawings are created in AutoCAD and then sometimes sent to other software such as AutoCAD software used by engineers, or GIS systems used by construction companies. In addition, architectural drawings are sometimes submitted to the client. In addition to architectural drawings, many other types of drawings may also be created in AutoCAD. Drawings used in manufacturing may include shop drawings, shop floor plans, as well as assembly drawings. AutoCAD for architects is delivered by two major software companies: Autodesk, Inc. and Bentley Systems. Autodesk's architectural Autodesk Architecture uses concepts based on the AutoCAD Architecture system to support architectural and engineering design. In June 2019, the company announced that the \$2,500 three-year subscription, Autodesk Architecture will be replaced with Autodesk Architecture EE, a \$5,000 annual subscription which expands the software by allowing customers to also use AutoCAD for building design. The Autodesk Architectural Engineering, used by users of Autodesk Architecture and Architectural Drafting, was included in AutoCAD 2018. The Architectural Engineering functions are based on the same components and programs as the Architecture function. In October 2018, Autodesk announced that it would be releasing a new software called Autodesk Building Analytics. A mobile app to allow users to "quickly search, analyze, and visualize data from your Autodesk Architecture projects." With the release of AutoCAD 2019, a number of changes were made to the product. A new function was added to the ribbon, which allows users to map layers on top of one another. The Show Commands Popup function, which was found in the menus when a ribbon button was clicked, now resides in the ribbon itself. In addition, the Help menu was improved. The Zoom levels were expanded from three to five, and the Display preferences were revamped. Release history
