A: As of today (2019/08/03), the Google Play Store does not support apps which download data from the Internet unless the download is initiated by the user. You can read in the documentation of the API on Google that: Apps that access Google Play services APIs must call the APIs on behalf of the user using our library and must never download or store user data. Apps must not display a UI to the user asking the user to access Google Play services APIs. When the user accesses Google Play services, the client should be in the background. Google Play Services APIs require the user to grant the app permission to access [Google Account
