I'm running a private network that does not have public ip range. I want to install Eureka on one of the machine of my network. I created my pod, registered to the Eureka server, but I get an error that says: Failed to register endpoint: no public ip address configured (if network interface is configured, it could be a NAT or a proxy) I'm sure my pod will have a public ip address. My network is: 172.10.224.120/29 (192.168.0.x/24) 192.168.0.56/30 How can I solve this? A: Eureka is resolving the eureka endpoint in order to register it. There is no way to circumvent that. If you want to prevent Eureka to register the pod it you have to add the following annotation to the Eureka Server's Deployment Config: apiVersion: v1 kind: Config metadata: name: eureka-server annotations: eureka.client.serviceUrl.defaultZone: This annotation will prevent the server to register the eureka endpoint 91bb86ccfa
