DeExifier Description: - delete the date and time from EXIF - rename jpg files - remove the IPTC information (Author, Caption,...) - change the default format from jpeg to png - change the size to custom from PNG -...Today's News: Our Take - The Most Hated TV Characters Tuesday Apr 30, 2013 at 8:46 PM Though we secretly wish The Oprah Winfrey Show to return for good, we'll miss our favorite talk-show host for the occasional "Love Line" snafu or lecture on love. We won't miss her, but today's pop culture hit list includes the most despised TV characters. TV Guide Magazine: You've listed a lot of TV characters for People. What's the biggest one that you've come across?Peggy Orenstein: Well, I would say Roseanne Barr. I hate Roseanne. In fact, I really hated her as a kid. I also hated Roseanne Conner, and I'm not fond of her new character. What a bully! She's the worst thing on TV right now. A real bully. People hate Roseanne, and she's taking advantage of the fact that there are so many unhappy people out there. TVGuide.com: People hasn't been on the air very long. Do you think she's just hitting her stride?Peggy Orenstein: She definitely doesn't need to be doing this anymore, but she's going to make a killing! [Laughs.] Roseanne needs to be careful, because she's come a long way and made a lot of friends. And those friends are all on the Tonight Show with Jay Leno and Letterman and Letterman's Next List.

DeExifier

DeExifier is a program that you should have on your system already as part of your anti-spyware suite. He has been a doctor for more than 10 years. "A regular palliative care consultation gives the patients and their families the opportunity to talk about their most intimate feelings and be listened to with empathy. This gives the patients a sense of calmness, an inner peace and a feeling of being understood. "They also know what to expect and prepare themselves for the future. That way they feel more secure and they avoid losing their sense of control. This helps them to accept their situation and prepare for death." In a recent study on end-of-life care, Matthijs states that he regularly speaks with patients who are dying but still have a desire to live: "I speak to them about their wish to live, to

live at their own pace, without any medical interventions." After talking to a patient about his life, it can help the family if he listens to their wishes. "They can then plan the manner and timing of their end of life. And the health care professionals can offer them other options they may have missed." "I know that palliative care is not always the first option for patients. But that patient should be given a realistic choice. The medical community should ensure that every patient has been well informed and that they give their consent." Fighting existential depression The Netherlands has one of the most generous palliative care systems in the world. The Dutch Health Council recommends that the palliative care for patients should start as early as possible in the disease. "The possible symptoms and medical options for managing a terminal illness are
