Straightforward looks It sports an intuitive interface that displays a clean feature lineup. You can view details about processes, set up global configuration settings with rules that can be applied for all processes, view details about the programs installed on your computer, collect statistics about resource usages, as well as manage services. Process configuration Chameleon Task Manager Pro gives you the possibility to view information about each process, such as name, CPU and memory usage, disk activity, and short description. A great feature of this tool enables you to apply several configuration settings for each process, so you can individually manage each item. The tweaking options comprised in this application enable you to stop or restart the selected process, set priorities and affinities, optimize the memory, send items to quarantine, create shortcuts on the desktop or in the Start Menu, open file location, and view file properties. There are several templates which include preset settings that can be applied to the selected process, such as High Performance, Balanced resource usage, and Move to quarantine. You may manually create your own templates, which can be customized by controlling CPU, RAM, and hard drive usage, checking if the program is frozen, allowing the utility to start only on certain days, and synchronize the tool with another application or file. Additionally, the CPU, RAM, and hard drive usage optimization modes empower you to set the program priority and affinity at startup, and show notifications, temporarily downgrade the priority, and close or restart the utility if the CPU exceeds a user-defined value. All programs, statistics, and services Chameleon Task Manager Pro enables you the check all utilities ever launched on your computer and view information about them, such as name, description, path, detection data, and last accessed date. The program needs some time to gather data about your usage statistics (CPU, disk activity, memory usage, and size), and you can make it collect details at a certain interval of time and over a period of time. When it comes to tweaking the services, you can enable or disable startup items, as well as start or stop them.
