Breeze [Updated-2022]

Breeze is a VST plugin that is perfect for adding subtle reverb effects to your audio productions. Apart from Aether, Breeze features an advanced-true stereo mode and a contour controller that allows its users to shape timbral variations of the effect. * Patented technology that allows the user to layer up to 5 of Breeze simultaneously: * Choose between 8 different reverb chambers (Up to 5 user-controllable reverb chambers per version of the plugin) * Each reverb chamber controls its own reverb level, decay time, and the amount of its transparency (effectiveness) * The most effective built-in reverb chambers give control to the user over the timbre of the effect * You can assign a different reverb chamber to each of your audio tracks: main, effects and aux tracks. The effect will only operate when the assigned track plays back. * You can assign the same reverb chamber to tracks of the same group. The effect will be played whenever one of the groups plays back, regardless of how the tracks are mixed in the track-group * To operate several Breeze reverb effects simultaneously, you can keep a track assigned to a reverb chamber "soft mute": the track will only play back when the reverb chamber is activated * Contour control allows you to control the shape of the effect (low-high-mid-high) rather than simply control the level of the effect (exact) * Each Breeze reverb chambers comes with a "normal" setting, a "warm" setting and a "fruity" setting. * You can assign each of the reverb chambers to a corresponding "color" in Breeze so that you can hear them. The reverb chamber's color is displayed on the panels where the setting is available. * Breeze has 8 independent reverbs chambers with specific controls * The overheads are not included * This plugin is compatible with all VST, AU and RTAS host applications: * Ableton Live 10 and higher * Digidesign Pro Tools 10 and higher * Steinberg Cubase 6 and higher * Audacity 2.0 and higher * Cakewalk Sonar 8 and higher * GarageBand 9 and higher * Logic Pro 8 and higher * Logic Express 8 and higher * Reaper 2.3 and higher * Reason 5 and higher * Reaper

What's New In Breeze?

A True Stereo Effect Add the power of a surround channel setup to your existing stereo signal, making the signal sound full and rich, and providing a smooth transition between instruments. Contour Shaper Control the timbre of your audio signal to create subtle changes and adaptations in the audio. With the Contour controller you can shape the timbre, changing the characteristics of the sound. Advanced-True Stereo Breeze is able to emulate the true stereo sound, which is best described as the sound of a five loudspeaker playback set-up. Under the hood, Breeze is composed of advanced algorithms and is able to model the sound of a modern DSP hardware configuration. Breeze is available for a variety of host applications such as MAC OS X, Windows and most audio recording applications. Requirements: Host software: Breeze VST for Mac OS X 10.6 or higher Breeze VST for Windows XP or higher Breeze VST for Mac OS X 10.3 or higher VST for Linux Installation: Download the installer from the Breeze website. The installer will appear in the Downloads box on the right side of the page. 1. Open the installer 2. Drag Breeze into your host software's audio window (sample image below): Source: Breeze website Contour Shaper: The contour controller in Breeze has been expanded to provide extra functions to users in order to enhance their experience with the plugin. The contour controller enables the user to shape the effect to fit their specific needs and to place the change smoothly in the signal. In order to create a specific shape, the user can modify the following parameters in the controller, with the help of the sliders provided in the interface (sample image below): The amount of resolution in terms of frequency is controlled by the resolution switch on the controller. The user can change the frequency range of the frequency graph, thus changing the processing of the effect. Changing the resolution will create the number of new frequency points in the frequency graph in the controller and adjust the graph as a consequence. The switch for frequency range is located at the top of the graph on the controller. The amount of contouring in the effect is controlled by the contour switch, which is located at the top right of the graph on the controller. The contour graph gives the user an overview of the effect settings, with the help of the contour control on
